PROFILE

I am a result-driven software developer with over seven years of experience in backend development, system architecture, and technical leadership. Currently, I work as a Principal Software Developer at CometChat, where I specialize in building scalable REST APIs, optimizing system performance, and leading a backend team.

WORK EXPERIENCE

- 2019 - PRESENT**
CometChat
Principal Software Developer
 - Developed and maintained scalable REST APIs to support millions of users.
 - Architected microservices using Node.js (NestJS) and PHP (Lumen) for efficient system performance.
 - Oversaw database migrations, including MySQL to TiDB, ensuring seamless data transitions.
 - Integrated ChargeBee for streamlined payment processing and subscription management, collaborating with internal stakeholders to resolve billing-related queries.
 - Led and mentored a team of backend developers to enhance productivity and code quality.
 - Spearheaded the development of the moderation microservice using NestJS and MongoDB, incorporating TensorFlow, Hugging Face, and OpenAI models to detect and moderate user-generated content.
 - Led the design and implementation of a robust webhooks platform that allows customers to seamlessly subscribe to real-time chat events (e.g., message sent, group created).
 - Automated server hygiene by creating Python scripts to periodically delete unused apps, reducing server load.

EDUCATION

- 2014 - 2017**
MUMBAI UNIVERSITY
 - Bachelor of IT
 - GPA: 3.2 / 4.0
- 2012 - 2014**
MUMBAI UNIVERSITY
 - HSC in Science
 - Score: 81 %

SKILLS

- PHP (Laravel, Lumen)
- NodeJS (NestJS)
- Python
- Golang
- MongoDB
- MySQL, TiDB
- Redis
- Kafka
- ChargeBee Integration
- Docker
- REST API Development
- Microservices Architecture
- TensorFlow, Hugging Face, OpenAI API
- Webhooks Architecture
- Deployment & Release Processes
- AI Integration for Developer Workflows

- Explored Golang as part of a POC to migrate legacy PHP services, assessed feasibility and presented findings.
- Set up Docker-based environments in staging to simplify backend onboarding for new developers and to accelerate local development workflows.
- Collaborated with engineering managers to design and implement a deployment checklist that ensures release consistency and stability.
- Optimized Redis caching strategies to improve real-time chat performance.
- Implemented Kafka for reliable and scalable event streaming.
- Collaborated cross-functionally to align technical implementation with business objectives.

2018 - 2019

Annet Technologies

PHP Developer

- Worked on multiple client projects primarily using Laravel and ReactJS.
- Added PHPUnit test coverage to existing codebases.
- Adopted and implemented industry-standard best coding practices.

H O B B I E S

- Reading technical blogs
- Playing Chess
- Trekking
